

Hej team 🙌

Thanks for your time. Excited to be here.

My name is Tomasz. I'm a generalist who created his first website at 13 and kept at it ever since. I'm a doer who ships through iteration, not perfection. Innate curiosity about the world and ordinary observations fuel my design ideas. Sitting at the crossroads of design, engineering, and business, I grasp problems better than most, spot issues early, and build solutions with people's needs at heart.

I see life as a series of projects - from cooking a decent meal to launching apps that help real people. Time is finite, so I hammer the scope down, stick to priorities, and cut distractions. My introverted side helps me notice the small struggles of ordinary folks (the ones businesses sometimes overlook in the rush for the next big thing). I believe good design can fix that - choosing simplicity, quality, and user-centred thinking over mediocrity.

That's why Track excites me. Helping companies scout, hire, evaluate, and train world-class engineers feels meaningful - it's about empowering people to build stronger teams and careers, not just ticking boxes.

With over 11 years as Founder/CPO of NerdCow (a B2B SaaS web design agency), I've not only led end-to-end design for user-centred web interfaces, run user research and testing (moderated/unmoderated, Google Design Sprints), built design systems for consistency, and collaborated closely with devs to ship and iterate using React/TypeScript - I've also hired and managed engineers and team members myself in a small agile team of 5. That hands-on hiring experience gives me real insight into the pain points of scouting talent, assessing skills, and onboarding people, which I think could be a real bonus when designing and evolving Track.

Your diverse, international setup - English-first, relaxed culture, real autonomy, and values like Friendly, Speedy, Professional, Teamwork, Respect, Evolution, Fun - aligns perfectly with how I work: collaborative yet independent, focused on long-term value and user feedback while delivering fast, professional results. The emphasis on cross-functional teamwork, mentorship, and expanding the platform feels like home. Plus, my N4/N3 Japanese and business-level English mean I can jump in and contribute right away.

I'd love to bring my hands-on experience, curiosity, doer attitude, and founder perspective to help evolve Track - making it even more intuitive and impactful for engineers and teams.

Hope you grant me the chance to chat and be part of the team.
